OBJECTIVE

Digitization has enabled steady increase of voluminous data across industries. Mostly, these data exists in various forms like paper, e-mails, forms, or office documents. Therefore, it may not help if they cannot be processed for meaningful information. Businesses earnestly seek for seamless, cost-effective, simple and scalable document capture solutions that can extract insightful information from various incoming documents and feed it to other enterprise applications that drive their business. The time and efforts lost in searching for the right information is an opportunity cost to the organization in terms of a lost business deal or poor customer servicing. This is high time for organizations to invest in an effective document capturing solution. This would eventually help in converting information from the documents into a more reliable and easily retrievable form.

PROJECT SUMMARY

The purpose of the document is to provide Image, Video and Audio compression.

Due to steady increase of the image size, it is difficult to transmit the files from one place to another. With the AdStringO Compression technology you will have a seamless transmission without losing the quality and aspect ratio to the Cloud Infrastructure

APPLICATION SOLUTION APPROACH

AdStringO Rest Web Service Compression tool will run on any windows system at the endpoint devices. It will fetch the files from the source folder and compressed it up to 90% and store in the destination folder.

REST API DETAILS

Service URL: - http://adsrestpoccomp.shrinkdocs.com/Service1.svc

Service URL with Method: http://adsrestpoccomp.shrinkdocs.com/Service1.svc/CompressFiles

Method: Post

Username= GramPro_POC

Method Name = CompressFiles

INPUT PARAMETERS

- UserName
- FileName with Extension
- Base64String

Input JSON Format:

```
{
    “UserName”:”<UserName>”,
    "FileName": “<Filename>",
    "FileBase64": "<Base64string>"
}
```

OUTPUT PARAMETERS

- Code
- CompressedBase64String
- Status

Output JSON Format

```
{
    “Code”:“ErrorCode”,
    "CompBase64 ":"<CompressedBase64string>",
    "Status ":"File Successfully Compressed"
}
```

INTEGRATION STEPS

1. **Create class to pass Input to the Rest Service**

```
public class Input_Jason
{       public string UserName { get; set; }
        public string FileName { get ; set}
        public string FileBase64 { get; set; }
}
```

2. **Add code to Convert the File to Base64string**

```
Base64String = FileToBase64(FilepathWithFileName);
```

3. **Add below code to Get file name from the file**

```
FileName = Path.GetFileName(FilepathWithFileName);
```

4. **Add below code to Assign Input to the JSON Class**

```
UserName= "<Put Company name>"
```

5. **Add below code to Assign Input to the JSON Class**

```
Input_Jason inputs= new Input_Jason
{       UserName=UserName, FileName = FileName,
        FileBase64 = Base64String
};
```

6. **Serialize Input in JSON Format:**

```
DataContractJsonSerializer ser = new
DataContractJsonSerializer(typeof(Input_Jason));
MemoryStream mem = new MemoryStream();
ser.WriteObject(mem,inputs);

string data = Encoding.UTF8.GetString(mem.ToArray(), 0, (int)mem.Length);
```

7. **Call Rest Service:**

```
string result =
        webClient.UploadString("http://adsrestpoccomp.shrinkdocs.com/Service1.sv
c " + "/CompressFiles", "POST", data);
```

8. **Deserialize Output from below code:**

```
JavaScriptSerializer serializer = new JavaScriptSerializer();
serializer.MaxJsonLength = 50000000;
dynamic item = serializer.Deserialize<object>(result);
string OutputFileBase64string = item["CompressedBase64String"];
string OutputStatus = item["Status"];
```

ERROR DESCRIPTION

Error Code & Status	Description
ADS00 | File Successfully Compressed	Success
ADS01 | Service Inactive or service connection failed	Authentication Service is not accessible
ADS02 | Invalid File Format	Invalid file format for compression
ADS03 | Server Busy	Network is not accessible
ADS04 | Invalid Base64 string	Invalid base64 passed as parameter
ADS05 | Compression Not Supported	Compression Service not working
ADS06 | Low quality Files	Input file as low quality
ADS99 | Others	Other service configuration related
